American logic in the 1920s.

Bull. Symb. Log. 1, No. 3, 273-278 (1995).

This paper partially surveys some of the works of Clarence Lewis, Emil Post, Alonzo Church, C. H. Langford and Haskell Curry developed in the 1920s. "The lessons to be learned are [...] that the development of the outlook on our subject that today we take for granted was attained only with great difficulty" [p. 277].

A. Garciadiego (Mexico).
