

Ferreirós, José

00005

Mathematics and Platonism(s). (Spanish).

Gac. R. Soc. Mat. Esp. 2, No. 3, 446-491 (1999).

In this penetrating essay, Ferreirós discusses the distinction between 'internal' and 'realistic' Platonism. Among some of the characters under discussion one finds: Cantor, Hilbert, Poincaré, Weyl and Gödel. Before concluding the essay, the author describes, as a research proposal (see: pages 468-472), a possible philosophical alternative. *Alejandro García-Rodrigo (México)*.
