Alfred Tarski: Semantic shift, heuristic shift in metamathematics.

*Synthese* 126, No. 1-2, 49-65 (2001).

The author "examine[s] how Tarski developed Hilbertian metamathematics in order to create the basis of a new domain of mathematical logic, i.e., model theory" [p. 49]. In particular, the author addresses the following historical questions, among others: "How did Tarski come to his views? What did he aim for in his own metamathematical investigations" [p. 51].

Alejandro García-Diego (México).
