

Otte, M.

00007

Does mathematics have objects? In what sense?

*Erkenntnis* 134, No. 1-2, 181-216 (2003).

This insightful, clear and precise essay discusses some of the philosophical consequences introduced within Kant's epistemology of mathematics, where mathematics is understood, by Otte, as an activity – the activity of building theories on the one hand and of problem solving, on the other" [p. 187].
